

# INFOR VELOCITY SUITE PROCESS OPTIMIZATION

with RPI Consultants

RPI has spent years helping Infor CloudSuite customers close the gap between how their systems perform and what they're capable of.

Infor Velocity Suite gives us sharper tools to complete that work. With Process Mining, Value+, GenAI, and Industry AI Agents we can diagnose, automate, and optimize for better ERP outcomes.

## HOW RPI DELIVERS INFOR VELOCITY SUITE VALUE

### Operations Assessment with Process Mining

We combine stakeholder interviews, configuration audits, and operational data to assess your system. Where those sources align, differ, or reveal something the others miss is where the most valuable findings often surface. Velocity Suite's Process Mining adds a layer, allowing us to measure your Infor processes against the Industry Process Catalog to reveal where your operations diverge from industry standards.

### Opportunity Roadmap Development

We score every identified opportunity by business impact and level of effort, build a roadmap with clear ownership, sequencing, and success metrics. All of our recommendations come with a business case, a timeline, and a helping hand to get the plan off the ground.

### Use Case Selection & Value Realization

Our consultants work alongside you from selection through implementation to ensure you get the results you're after. We match capabilities to specific process problems, order them by value and organizational readiness, and stay involved until the outcomes are measured and proven. Common starting points include invoice matching exceptions, finance close cycle delays, employee scheduling exceptions, and vendor onboarding bottlenecks.

### Automation Planning & Implementation

We've been helping Infor customers automate manual work long before AI. We look at Infor's native capabilities, RPA, Value+ automations, and whatever else is already in your environment to find the right solutions. For delivered Value+ automations, we help you turn them on quickly to capture value fast. And for more complex needs, we design, build, and implement a tailored solution.

### Change Management & Adoption Planning

Technology only delivers value when your teams are ready to use it. RPI helps you train stakeholders, define new process expectations, and build an adoption plan that keeps improvements moving after go-live.

## PUT INFOR VELOCITY SUITE TO WORK WITH RPI

RPI brings the institutional knowledge, process expertise, and methodology needed to maximize use of Infor Velocity Suite.
