

MAXIMIZING CLOUDSUITE SUCCESS POST GO-LIVE WITH RPI CONSULTANTS

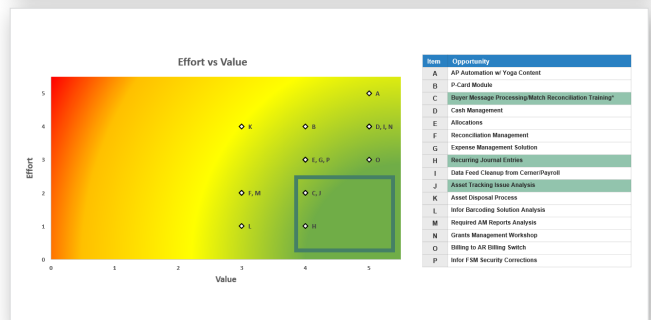

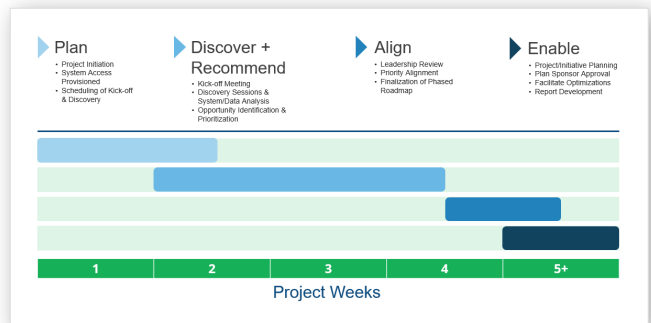

At RPI we understand that Infor is a foundational part of the toolkit that supports your business processes. As a trusted partner, we can help you implement leading practices to enhance your Infor solutions so that they can better meet your organization's unique goals.

With over 20 years' experience implementing and optimizing Infor ERPs, we know how to maximize the performance of back-office systems and applications. We're pleased to offer a post-go-live assessment to help you optimize your CloudSuite ERP.

1 Assess Infor Applications & Processes: Your people are your greatest asset and empowering them to do their jobs more effectively is all but guaranteed in CloudSuite. The post go-live phase is a great opportunity to stabilize the system and optimize applications for greater use. That's why our post go-live assessment begins with a review of the identified functional areas you'd like to focus on. This includes any or all your HCM, FSM, WFM, and technical applications. Once confirmed, we'll explore the requested areas for optimization and improvement.

2 Identify High Value Improvements: Following the initial review, our team will develop a list of potential enhancements for your Infor applications and business processes. As part of our assessment deliverables, we'll provide you with a heatmap to indicate the level of effort and the corresponding value-add for each enhancement opportunity identified.

3 Recommend Priorities & Outcomes: The final portion of our post go-live CloudSuite assessment includes evaluation of opportunities to implement workflows and self-service functionality to reduce manual work. This includes understanding of the current configuration, business processes, functionality gaps, and technical needs. We'll also look at existing custom applications to potentially replace with Infor functionality. From there we'll present recommendations, an estimated project timeline, and potential outcomes.

TOP OPPORTUNITIES

- AP Automation with Intelligent Data Capture & Approval Workflow**
AP automation for invoice processing with intelligent data capture and approval routing constitutes an objective business case with a relatively fast and measurable return on investments.
- Implement Grants Management**
Grant Management is a post-award application that works in conjunction with Infor Financials Procurement, and Human Resources to provide a solution that integrates planning, payroll, purchasing, and accounting processes for optimum administration, tracking, and reporting of sponsored projects.
- Improve Procure to Pay Efficiencies**
Gaining better control, visibility, and reporting around inventory, capital projects and budget is important for RUSD. Use of the Project Accounting module for CIP tracking will force accurate GL coding, provide visibility into commitments and actuals, monitor project budget, and track capitalization history.

THE RIGHT SOLUTIONS AT THE RIGHT TIME.

Make no mistake, going live on CloudSuite is a major milestone. But the phase that comes after is an opportunity to strategically expand, enhance, and optimize your ERP system so that it can better help you achieve your business goals.
